```
useful for enhancing the immune regulators of byth proprepries are useful for enhancing the immune regulators of the observation of growth and maintenance of cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (1) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cetticular cancer and cancers of haematopoietic system. B7-L polypeptide plathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease. T-cell dependent B-coll mediated diseases and autoimmune diseases. B7-L molecules are useful for alleviating the symptoms associated with diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic immune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and userties). Grave's disease, Hashimoto's thyroidities and disease such as inflammatory bowel disease (Crohn's disease and useful for disponsis and treatment of diseases (Crohn's disease and colltis), Grave's disease, Hashimoto's thyroidities and collemnial cell proliferation or to prolong graft survival. B7-L bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for disponsis and treatment of diseases (Crohn's allowidation de toblood allowidation of toxic shock spindrome or allosentistisation de toblood allowidation de toblood allowidation of toxic shock spindrome or allosentistisation de toblood allowidation of toxic spindrome and hyporasmitivity of the spindrome or allowidation de toblood allowidation of toxic spindrome or allowed allowed and hyporasmitivity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               421 AACCTIGIGAAGTIACTIGICIACCCTCACACIGGACCCGGCTCCCGGAIAITICCIGGG 480

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ATTCGGGGAACATCAGATGCAGCCTCCAGAACAGTCGCCTGCATGGATCTGCTTACCTTA 360
                              The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polymucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, pretern labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are extracellular domains and other regulators (I) plays a role in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  transfusions, and for treatment of allergy, asthma and hypersensitivity reactions, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pneumopathies (extrinsic alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myaschenia gravis, and lymphoproliferative disorders such as multiple myeloma. The present sequence represents the coding sequence of human B7-L_h1

Otsuki T, Wakamatsu A, Sato H, Ishii S; Hio Y, Otsuka K, Nagai K, Irie R, Tamechika I; Otsuka M, Nagahari K, Masuho Y;

The invention discloses a polymucleotide comprising a sequence selected from 1970 fully defined nucleotide sequences which encode novel collined is a polymeptide encoded by the polymucleotide, on antibody binding to the polympetide or peptide or its partial peptide, immunologically assaying the polympetide or peptide of the polymucleotide, immunologically assaying the polympetide or peptide of the polymucleotide by contacting the polympetide or peptide or with the antibody of the encoded protein, and observing the binding between the two, a transformant carrying the polymucleotide in a series of a primer for synthesising the polymucleotide in a succeeding the polymucleotide. The oligonucleotide is useful as a primer for synthesising the polymucleotide in as a probe for detecting the polymucleotide in the polymucleotide and encoded proteins are useful as pharmaceutical agents and many disease-related conceins are useful as pharmaceutical agents and activity, or as targets of genes may be included in them, for developing a diagnostic marker or medicines for regulation of their expression and activity, or as targets of gene therapy. The genes are involved in tissue and/or cell concoding them can be used as indicacors for diseases (e.g. osteoporosis, concoding them can be used as indicacors for diseases (e.g. osteoporosis, neurological diseases, cancer, tumours. The cDNA may be used to regulate the activity or expression of the encoded protein to treat diseases. The sequence presented is a cDNA of the invention. Note: Some of the sequence can be used as indicacting the invention of the printed specification, but is based on sequence information supplied by the European Patent office.

(AMGE-) AMGEN INC.

Welcher AA, Sarmiento UM, Schultz HJ, Chute HT;

WPI; 2002-130881/17. P-PSDB; AAU75542. New B7-like polypeptides, polynucleotides and their modulators, useful for diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis.

Claim 1; Fig 3; 135pp; English

The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polymucleotide encoding it and antibody against (I) are polypeptide, polymucleotide encoding it and antibody against (I) are conditions including P7-like polypeptide-related disease, disorders or conditions including P7-like polypeptide-related disease, disorders or miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are considered including seminal vesicle hyperplasta in transgenic mice overexpressing B7-L conformal vesicle hyperplasta in transgenic mice overexpressing B7-L colloperied. Hence modulators of (I) are useful for the treatment of seminal vesicle hyperplasta in transgenic mice overexpressing B7-L colloperied. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, ceresticular cancers and cancers of hemanopoletic system. B7-L molecules are useful considered diseases and autoimmune disease. B7-L molecules are useful cort alleviating the symptoms associated with disease involving chronic for alleviated diseases and autoimmune disease. B7-L molecules are useful cort memanocytopenic purpura and psoriasis, chronic inflammatory diseases such as inflammatory bowel disease. Habinoto's thyroiditis and ulcerative colitis), Grave's disease, Habinoto's thyroiditis and ulcerative colitis), Grave's disease, Habinoto's thyroiditis and ulcerative colitis), Grave's disease (I mollypeptides are useful for diseases such as inflammatory bowel disease (Lon's disease and vascular restencesis. Antagonists of B7-L polypeptides are useful for diseases such as inflammatory bowel disease (Cromic inflammatory diseases und avoing the are also useful as maning are useful for disease contractions, mephropathies (e.g. glomerulomephries, coeliac disease, delabetes or alleviation of toxic shock syndrome or alleviated or alleviation of toxic

d ð g Пр ð 충 g ð g ð 셤 qq à ð g 8 셤 à g ਨੇ The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polynucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, conditions including reproductive disorders (e.g. infertility, and conditions including reproductive disorders and endometriosis) and confirmative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role in craspinal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (I) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, testicular cancer and cancers of haematopoietic system. B7-L polypeptide response in pathway can be manipulated to regulate cytotoxic T-lymphocyte response in considered diseases and autoimmune diseases. T-cell dependent B-cell mediated diseases and autoimmune diseases. B7-L molecules are useful for alleviating the symptoms associated with diseases involving chronic useful New B7-like polypeptides, polynucleotides and their modulators, ufor diagnosing, preventing and treating reproductive, immune and proliferative disorders, e.g. cancer and arteriosclerosis. Claim 1; Fig 2; 135pp; English

```
immune cell dysfunction or to treat autoimmune diseases such as systemic lupus erythematosus, rheumatoid arthritis, multiple sclerosis, diabetes, disease thrombocytopenia and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn's disease and disease such as inflammatory bowel disease, Hashimoto's thyroiditis and clabetes mellitus. They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases or involving abnormal cell proliferation, including arteriosclerosis and vascular restenosis. Antagonists of B7-L polypeptides are useful for alleviation of toxic shock syndrome or allosensitisation due to blood transfusions, and for treatment of allergy, asthma and hypersensitivity creations, nephropathies (e.g. glomerulonephritis), skin disorders (pemphigus and pemphigoid), endocrinopathies (Grave's disease), various pheumopathies (extrinis, alveolitis), vasculopathies, coeliac disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and myasthenia cy present sequence represents the coding sequence of human B7-L_D2.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                157
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      150

cc useful for treating B7-like polypeptide-related disease, disorders or useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscartiage, preterm labour and delivery and endometriosis) and proliferative disorders: Antibodies, soluble proteins comprising proliferative disorders: Antibodies, soluble proteins comprising correctlular domains and other regulators of B7-L polypeptides are conseful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of convert properties and cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L concer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cesticular cancer and cancers of haematopoietic system B7-L polypeptide testicular cancer and cancers of haematopoietic system. B7-L polypeptide control mediated diseases and autoimmune diseases. B7-L molecules are useful cor allorated diseases and autoimmune diseases such as systemic immune chlombocytopenic purpura and sociated with diseases such as systemic cimmune thrombocytopenic purpura and psoriasis, chronic inflammatory disease such as inflammatory bowel disease (Crohn, s disease and ulcerative colitis) Grave's disease (Crohn, s disease and ulcerative colitis) Grave's disease (Crohn, s disease and culcerative colitis) Grave's disease (B7-L polypepties survival. B7-L molecules are also useful for diagnosis and treatment of diseases and involving abnormal cell proliferation, including arteriosclerosis and involving abnormal cell proliferation, including arteriosclerosis and curvaliance of toxic shock syndrome or allosensitiation due to blood cranshronal cell allosensitiations, and for treatment of allosensitiations, what got treatment of allosensitiations are useful for allosensitiations, asthminated or allosensitiations are useful for allos
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

involving abstrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or of act and products dependent on DNA and and to produce other types of data and products dependent on DNA and and to produce other types of data and products dependent on DNA and coding sequences. AAS64197-AAS94564 represent novel human diagnostic patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
          expressing (II). (I) and (II) are useful for treating disorders aberrant protein expression or biological activity. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            399
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             279

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging
                                                                                                                                                                                                                                                                                                                          CTGCCGCCGTCGTTGTTGTGGCTGCACTGCTGCCGTTGTTGTTTCTGCTGTAGAAG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention relates to single exon nucleic acid probes (SENP). The present sequence is one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 258 AGTCCTGAAGGCTTCCAGGCTTCAACTGCACCGTCTCCCAGGGCTGGAAGCTCAT

                                                                                        ⋧
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to an isolated polymucleotide comprising any one of 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was determined by the technique of SBH (sequencing by hybridisation). Also included is a purified polypetide comprising a sequence corresponding to a reading frame of the novel polymucleotide. The nucleic acid sequences are useful in diagnostics as expressed sequence tags (EST) for are useful in diagnostics as expressed sequence tags (EST) for informacis, in assessing biodiversities, or in identifying mutations responsible for genetic disorders and other traits. The nucleotide sequences are also useful as hybridisation probes, as oligomers for PCR, for chromosome and gene mapping, in the recombinant production of protein, or in generating antisense DNA or RNA. The purified polypeptide is one of the 38043 isolated CDNA/EST sequences. Note: The sequence data for one this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at sequence. html?DDocID=20030073623

```
The present invention relates to novel single exon nucleic acid probes. The present sequence is one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe breast at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnoshing, grading, staging, monitoring and prognoshing diseases of the human breast, particularly those diseases with polygenic aetiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast fibrocystic changes, proliferative breast disease and non-carcinoma tumours. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences

·,
                                                             18
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26-MAR-2002
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           27-SEP-2001
                                                                                                                                                                                                                                                                                                                                                                                                           Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ABL15492;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT 11
ABL15492/c
```

Myers EW;

```
The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL1640-ABL1617) and the encoded proteins (ABB57737-ABR2072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Mouse; B7-like protein; B7-L; antiinfertility; gynaecological; antitumour; cytostatic; immunosuppressive; antiarthritic; antirheumatic; antiinflammatory; dermacological; antipsoriatic; neuroprotective; antidiabetic; haemostatic; antifyvoid; antiulcer; antiallergic; antidiabetic; nephrotropic; antibacterial; virucide; tumour; cancer; reproductive disorder; graft versus host disease; autoimmune disease; toxic shock syndrome; allergy; nephropathy; skin disorder; dendocrinopathy; lymphoproliferative disorder; gene; ss.
                                                                                                                                                          New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell

growtn and maintenance or cancer cells based on the observation of seminal vesicle hyperplasia in transgenic mice overexpressing B7-L polypeptide. Hence modulators of (1) are useful for the treatment of cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cancer including seminal vesicle cancer, lung, brain, breast, ovarian, cesticular cancer and cancers of haematopoietic system. B7-L polypeptide pathway can be manipulated to regulate cytotoxic T-lymphocyte response in allograft transplantation, graft versus host disease. T-cell dependent B-cel mediated diseases and autoimmune diseases involving chronic immune cell dysfunction or to treat autoimmune diseases such as systemic inpus erythematosus, rheumatory activitis, multiple scleroisis, diabetes, immune thrombocytopenic purpura and psoriasis, chronic inflammatory bowel disease (Crohn's disease and disease such as inflammatory bowel disease (Crohn's disease and disease such as inflammatory bowel disease (Crohn's disease and diseases and activities). Gave's disease, Hashimoto's thyroiditis and disease mellitus. They are also useful as immunosuppressive agents for bone marrow and organ transplantation or to prolong graft survival. B7-L bone marrow and organ transplantation or to prolong graft survival. B7-L molecules are also useful for diagnosis and treatment of diseases. Cromplemia and phorosthies (e.g. glomerulomaphritis), skin disorders and leviation of toxic shock syndrome or allosenshissation due to blood vascular restenosis. Antagonists of B7-L polypeptides are useful for reactions, nephropathies (e.g. glomerulomephritis), skin disorders cartions, nephropathies (e.g. glomerulomephritis), skin disorders cortinated phyrophyropathies (e.g. glomerulomephritis), asthma and mysthenia cardinadory disease, anaemia, thrombocytopenias, Guillain-Barre syndrome and mysthenia gravis, and lymphoproliferative disorders such as multiple mystemia gravis, and lymphoproliferative disorders such as multiple mystemias processes anaemia, therefore represents t
                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated B7-like (B7-L) polypeptide (I). The polypeptide, polymucleotide encoding it and antibody against (I) are useful for treating B7-like polypeptide-related disease, disorders or conditions including reproductive disorders (e.g. infertility, miscarriage, preterm labour and delivery and endometriosis) and proliferative disorders. Antibodies, soluble proteins comprising extracellular domains and other regulators of B7-L polypeptides are useful for enhancing the immune response to tumours. (I) plays a role in growth and maintenance of cancer cells based on the observation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glial cell line-derived neurotrophic factor receptor gamma 1; GDNFR-alpha; glial cell line-derived neurotrophic factor; GDNF; neurodegenerative disease; amyotrophic lateral sclerosis; GDNFR-gammal;

```
PCR primers AAV99359-60 were used to amplify cDNA encoding the full length protein of a glial cell line-derived neurotrophic factor receptor gamma 1 (GDNFR-gammal). The amplified product was subsequently cloned and acpressed in Baculovirus. GDNFR-beta shares high homology with GDNFR-neurotrophic factor (GDNF) and mediating with glial cell line-derived neurotrophic factor (GDNF) and mediating cell response to GDNF. The GDNFR polypoptides and agonists can be used for treating disorders associated for treating neurodegenerative diseases such as amyotrophic lateral
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               sclerosis, Parkinson's disease, schizophrenia, insomnia, tardive dyskenisia, hypertension, pituitary adenomas, hyperprolactinemia, thyroid tumour, renal disorders, kidney failure, gut dysfunction, or for regeneration of cardiomycoytes, epithelium or hepatocytes. Antagonists of the polypeptides can be used for treating disorders associated with increased activity of the respective polypeptides. The products can also

New Arabidopsis thaliana nucleic acid for identifying homologous genes, producing compositions that modulate the expression or function of its encoded protein, and mapping functional regions of protein. Yu Y; WPI; 2002-403163/43.

Claim 1; SEQ ID NO 930; 49pp + Sequence Listing; English.

The invention relates to an Arabidopsis thaliana nucleic acid (I)

Comprising a sequence capable of hybridising under stringent conditions

CC comprising a sequence capable of hybridising under stringent conditions

CC do sequence selected from any one of 999 sequences (ABN893213-ABN892211),

GI), a transgenic plant (III) comprising an exogenous nucleic acid or a genetically modified cell (IV) comprising an exogenous nucleic acid, is

CC genetically modified cell (IV) comprising an exogenous nucleic acid, is

CC serein in demnifying homologous or related genes, in producing

CC societed physiological pathways. (I) is also useful for the genetic

CC societed physiological pathways. (I) is also useful in studying

CC societed physiological pathways. (I) is also useful in studying

CC screening assays of various plant strains to determine the strains that

CC screening assays of various plant strains to determine the strains that

CC screening assays of withstanding a particular disease or environmental

Stress. (II) and (III) are useful for screening of biologically active

Stress. (II) and (III) are useful for screening of biologically active

CC stress. (II) and (III) are useful in improved methods of treating

CC pathways. The screened agents are useful in improved methods of treating

CC pathways. The screened agents that mimic or enhance the action of tolerance

CC factors. Such agents are useful in improved methods of treating crops to

CC enhancing or inhibiting production of a biosynthetic product in a plant.

(III) is useful for identifying other mediators that enhance or induce

CC enhancing or inhibiting production of a biosynthetic product in a plant.

(III) is useful for identifying other mediators that enhance to which

CC paystribetic pathways of nutritional, commercial or medicinal value and

CC paystribetic pathways of nutritional, commercial or medicinal or medicinal

CC consponents of the cellular metabolism and for screening compounds

```
This sequence encodes a novel glial cell line-derived neurotrophic factor alpha-3 receptor (GDNF alpha-3). This protein can be used to treat e.g. neurodegenerative diseases (such as Parkinson's Disease, amyotrophic lateral sclerosis (ALS), spinal muscular atrophy (SNA), Huntington's Disease, Alzheimer's Disease, diabetic neuropathy), muscular diseases (including the muscular dystrophies) and nerve and muscle trauma and in diagnostic assays for such conditions
                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New factor alpha 3 receptor polypeptide and e.g. DNA and agonists - used to treat neuro degenerative diseases, muscular diseases and nerve and muscle trauma and in diagnostic assays.
that may affect the biological function of the gene or gene products. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPTO at segdata.uspto.gov/sequence.html?DocID=999909770445
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Glial cell line-derived neurotrophic factor alpha-3 receptor; GDNF; treatment; neurodegenerative disease; Parkinson's Disease; ALS; SYM; amyotrophic lateral sclerosis; spinal muscular atrophy; nerve; trauma; Huntington's Disease; Alzheimer's Disease; diabetic neuropathy; muscle; muscular dystrophy; diagnostic; ss.
                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /note= "partial sequence of glial cell-derived neurotrophic factor alpha-3 receptor"
